Subject Index

A

Absorption
  apolipoprotein A-IV in regulation of food intake and, 231, 237–38
  fat metabolism in insects and, 23, 32–33
  nutritional iron deficiency and, 1, 4–11
  polyphenols and cancer, 386–88
  zinc homeostasis and, 429, 438–46
ACC1 gene
  Saccharomyces cerevisiae fatty acid metabolism and, 108–9
Accessory factors
  C/EBP regulation of gene expression and, 141, 152–54
Accumulation
  folate catabolism and, 260, 261–62
Acheta domesticus
  fat metabolism in insects and, 27–28, 36
Activation
  peroxisomal β-oxidation and PPARα, 201–2, 216–17
  Saccharomyces cerevisiae fatty acid metabolism and, 100–1
Acute phase response
  vitamin A and, 167, 172–74
Acyl-CoA-binding protein
  peroxisomal β-oxidation and PPARα, 209
Adaptive metabolic system
  peroxisomal β-oxidation and PPARα, 193–224
Adolescents
  nutritional iron deficiency and, 4, 14, 17
Aedes aegypti
  fat metabolism in insects and, 28–29
Aeschna cyanea
  fat metabolism in insects and, 33
Africa
  "fetal origins" hypothesis and, 80–81
  vitamin A and, 183
African Americans
  African diaspora and nutritional consequences, 47–65
African diaspora
  nutritional consequences of
    adult anthropometrics, 56–59
    childhood undernutrition, 54–56
    diabetes, 59–61
    diet in Africa and the diaspora, 52
    historical background, 48–51
    hypertension, 61–63
    introduction, 48
    miscellaneous nutrition-related outcomes, 63–65
    nutrition transition, 53–54
    obesity, 56–59
    summary, 65
Alcohol
  folate catabolism and, 273
p-Aminobenzoylglutamate
  folate catabolism and, 264
Ancylostoma duodenale
  gastrointestinal nematodes, nutrition, and immunity, 298
Anemia
  "fetal origins" hypothesis and, 78
  nutritional iron deficiency and, 4, 10, 11–14
Anorexia
  maintenance dialysis patients and, 343, 352–56
Anthopometrics
  adult
    African diaspora and nutritional consequences, 56–59
Anticonvulsant drugs
  folate catabolism and, 255, 272
Antihelminthics
  gastrointestinal nematodes, nutrition, and immunity, 311
Antioxidants
  polyphenols and cancer, 381, 385–86
AOX deficiency
  peroxisomal β-oxidation and PPARα, 216–19
APA1 gene
  Saccharomyces cerevisiae fatty acid metabolism and, 110
Apical epithelial surfaces
  megalin- and cubilin-mediated endocytosis, 407–23

Apis mellifera
fat metabolism in insects and, 26
Apolipoprotein A-IV
regulation of food intake and
central administration of apo A-IV inhibits food intake, 243–44
chronic high-fat feeding, 247–48
chylomicrons, 234–35
conclusions, 248
dietary lipids
absorption, 237–38
luminal digestion and uptake of, 233–34
future research, 248
intestinal secretion, 235–40
intestinal synthesis, 236–40
intravenous infusion of apo-A-IV inhibits food intake, 240–43
introduction, 232
long-term control of food intake, 245–46
mechanisms of fat absorption, 232–35
peptide YY, 238–40
as short-term satiety factor, 244–45
upper gastrointestinal function, 246–47
Apolipoproteins
fat metabolism in insects and, 30
Ascaris lumbricoides
gastrointestinal nematodes, nutrition, and immunity, 298, 300, 304
vitamin A and, 169–70
Ascorbic acid
nutritional iron deficiency and, 6, 10–11

B

Bangladesh
vitamin A and, 168–70
Barrier functions
vitamin A and, 174–75
Basal iron losses
nutritional iron deficiency and, 2–3
B-cells
vitamin A and, 167–80
Behavioral factors
successful weight loss maintenance and, 330–34
Benzimidazoles
gastrointestinal nematodes, nutrition, and immunity, 311
Bifunctional proteins
peroxisomal β-oxidation and PPARα, 193, 205–6
Bile acid intermediates
peroxisomal β-oxidation and PPARα, 193–224
Bioavailability
nutritional iron deficiency and, 1, 7–9
polyphenols and cancer, 386
Bioincompatible membranes
maintenance dialysis patients and, 360–61
Biological affinity matrices
megalin- and cubilin-mediated endocytosis, 407–23
Birth weight
"fetal origins" hypothesis and, 73–89
Black populations
African diaspora and nutritional consequences, 47–65
Blatella germanica
fat metabolism in insects and, 27
Block Food Frequency Questionnaire
successful weight loss maintenance and, 327
Body mass index (BMI)
successful weight loss maintenance and, 325–26
Body weight
apolipoprotein A-IV in regulation of food intake and, 231
successful weight loss maintenance and, 323–38
Bombyx mori
fat metabolism in insects and, 32
Bone marrow
nutritional iron deficiency and, 12, 15
vitamin A and, 175
Bone morphogenetic protein-1 (BMP-1)
megalin- and cubilin-mediated endocytosis, 407, 410–11, 416–17
Boys
nutritional iron deficiency and, 4
Branched-chain acyl-CoA oxidase
peroxisomal β-oxidation and PPARα, 193–224
Breast milk
vitamin A and, 169
Britain
nutritional iron deficiency and, 14

C

Caenorhabditis elegans
megalin- and cubilin-mediated endocytosis, 410
Caffeic acid
polyphenols and cancer, 383
Calcium

nutritional iron deficiency and, 5–6, 11
Calliphora erythrocephala
fat metabolism in insects and, 28
Canada
nutritional iron deficiency and, 16
Cancer
African diaspora and nutritional consequences, 47, 63
folate catabolism and, 255, 271, 272
nutritional iron deficiency and, 13, 15
peroxisomal β-oxidation and PPARα, 193
polyphenols and, 381–99
Carbamazepine
folate catabolism and, 272
Carbohydrate
G6PD dietary control and, 121–34
LDL heterogeneity and, 283
Carbon
folate catabolism and, 255–58, 274
Cardiovascular disease
African diaspora and nutritional consequences, 47, 61–65
"fetal origins" hypothesis and, 73–74
LDL heterogeneity and, 283, 286–87
maintenance dialysis patients and, 363–64
nutritional iron deficiency and, 15, 17
Carotenoids
fat metabolism in insects and, 28
Carribbean populations
African diaspora and nutritional consequences, 47–52, 54–55, 57–61, 63–64
Catabolism
folate, 255–75
Catch-up growth
"fetal origins" hypothesis and, 81–82
Catechins
polyphenols and cancer, 381, 390–91, 394–95
CAT genes
Saccharomyces cerevisiae fatty acid metabolism and, 103–4
C/EBP transcription factor family
regulation of gene expression and accessory factors, 152–54
C/EBPα, 145–46, 150–51
C/EBPβ, 146–47, 151–52
cAMP, 155–57
conclusions, 158–59
glucocorticoids, 157–58
hormonal regulation of PEPCK gene transcription, 154–58
inhibition, 145–47
introduction, 142–43
mechanisms for mediation of effects of nutrients and hormones on gene expression, 147–52
PEPCK gene transcription, 154–58
phosphorylation, 149–52
properties of C/EBPs, 143–44
relative roles of C/EBP isoforms in energy metabolism, 144–47
thyroid hormone, 157–58
Cellular compartmentation
folate catabolism and, 258–59
Cellular expression
megalin- and cubilin-mediated endocytosis, 412–13
Cellular growth
G6PD dietary control and, 121, 125
Center for Epidemiologic Studies Depression Scale (CES-D)
successful weight loss maintenance and, 335
Central administration
apolipoprotein A-IV in regulation of food intake and, 243–44
Chicken
nutritional iron deficiency and, 6
Chickenpox
vitamin A and, 169
Children
African diaspora and nutritional consequences, 54–56
"fetal origins" hypothesis and, 73–89
gastrointestinal nematodes, nutrition, and immunity, 303
nutritional iron deficiency and, 17
preschool dietary assessment and, 475–96
successful weight loss maintenance and, 326
vitamin A and, 167–84
China
zinc homeostasis and, 440–41, 446
Cholesterol
African diaspora and

nutritional consequences, 47, 55, 64–65
LDL heterogeneity and, 283–91
Chronic disease
"fetal origins" hypothesis and, 73–89
Chronic peritoneal dialysis
maintenance dialysis patients and, 349–50
Chronic renal failure
maintenance dialysis patients and, 343–66
Chylomicrons
apolipoprotein A-IV in regulation of food intake and, 231, 234–35
CoA esters
peroxisomal β-oxidation and PPARα, 193–224
Coevolutionary paradigm
gastrointestinal nematodes, nutrition, and immunity, 308–9
Cofactors
folate catabolism and, 255–75
peroxisomal β-oxidation and PPARα, 212–13
Community mortality studies
vitamin A and, 180–81
Comorbidity
maintenance dialysis patients and, 356–57, 363
Complement C1r/C1s
megalin- and cubilin-mediated endocytosis, 407, 410–11, 416–17
Constitutive regulators
C/EBP regulation of gene expression and, 142–65
Coronary artery disease
African diaspora and nutritional consequences, 47, 61–65
LDL heterogeneity and, 283, 286–87
nutritional iron deficiency and, 15, 17
CsSmoS computer algorithm
Saccharomyces cerevisiae fatty acid metabolism and, 107
Cubilin
protein-bound megalin- and cubilin-mediated endocytosis, 407–23
Curcumin
polyphenols and cancer, 383
Cyclic adenosine monophosphate (cAMP)
C/EBP regulation of gene expression and, 141, 148, 155–57
Cytochrome P450ω oxidation
peroxisomal β-oxidation and PPARα, 193–224
Cytokines
vitamin A and, 174, 176–78
Cytoplasmic pools
Saccharomyces cerevisiae fatty acid metabolism and, 102
Cytosol
glutathione peroxidases and, 458–59

D

Daidzein
polyphenols and cancer, 383, 392–93
DC11 gene
Saccharomyces cerevisiae fatty acid metabolism and, 105
Decreased intake
vitamin A and, 169
Delayed gastric emptying
maintenance dialysis patients and, 354, 356
Delayed-type hypersensitivity response
vitamin A and, 177, 181
Delivery
fat metabolism in insects and, 37–38
Desaturation
Saccharomyces cerevisiae fatty acid metabolism and, 109–10
Developed countries
"fetal origins" hypothesis and, 78–80
nutritional iron deficiency and, 4
Developing countries
"fetal origins" hypothesis and, 80–81
nutritional iron deficiency and, 4
Diabetes mellitus
African diaspora and nutritional consequences, 47, 59–61, 65
"fetal origins" hypothesis and, 74, 81–83
nutritional iron deficiency and, 1, 17
Diacylglycerol
fat metabolism in insects and, 23
Dialysis
maintenance
nutritional management of patients and, 343–66
Diarrhea
vitamin A and, 169–70, 175, 181–82
Diatraea grandiosella
fat metabolism in insects and, 31
Digestion
fat metabolism in insects and, 23–38
2,3-Diglycerophosphate

nutritional iron deficiency and, 4, 12
Dihydrofolate
folate catabolism and, 265
Dihydroxycoprostanoic acid
peroxisomal β-oxidation and PPARα, 193–224
Diphenylhydantoin
folate catabolism and, 272
Direct loss
vitamin A and, 170–71
DNA binding
C/EBP regulation of gene expression and, 141
Domains
megalin- and cubilin-mediated endocytosis, 407, 410–11, 416–17
Drosophila melanogaster
fat metabolism in insects and, 28, 30
Drosophila pachea
fat metabolism in insects and, 25
Dysentery
vitamin A and, 170, 182

E

Eating disorders
successful weight loss maintenance and, 335–36
EC11 gene
Saccharomyces cerevisiae
fatty acid metabolism and, 112
Eicosanoids
peroxisomal β-oxidation and PPARα, 193–224
ELO genes
Saccharomyces cerevisiae
fatty acid metabolism and, 110–12
Elongation
Saccharomyces cerevisiae
fatty acid metabolism and, 110–11
Endocytosis
fat metabolism in insects and, 23
megalin- and cubulin-mediated polarized epithelia and, 407–23
Energy requirements
gastrointestinal nematodes, nutrition, and immunity, 297, 299–305
Enterodiol
polyphenols and cancer, 383
Enterogastrones
apolipoprotein A-IV in regulation of food intake and, 246
Enterohepatic circulation
polyphenols and cancer, 388
Epidemiology
"fetal origins" hypothesis and, 78–84
gastrointestinal nematodes, nutrition, and immunity, 300–1
preschool dietary assessment and, 475
successful weight loss maintenance and, 335
Epilachna varivestis
fat metabolism in insects and, 26
Erythron
nutritional iron deficiency and, 13
Erythropoietin
nutritional iron deficiency and, 3, 7, 12
Escherichia coli
Saccharomyces cerevisiae
fatty acid metabolism and, 100
Essential fatty acids
fat metabolism in insects and, 27–28
Estimated average requirements
zinc homeostasis and, 447
Estrogen
polyphenols and cancer, 381
Eukaryotes
Saccharomyces cerevisiae
fatty acid metabolism and, 97–112
European slave trade
African diaspora and nutritional consequences, 47–65
Evolution
megalin- and cubilin-mediated endocytosis, 407
Exercise
successful weight loss maintenance and, 323, 326, 329–31
Export
fat metabolism in insects and, 33–34

F

FAA genes
Saccharomyces cerevisiae
fatty acid metabolism and, 102
Factorial approach
zinc homeostasis and, 429, 433
FAH1 gene
Saccharomyces cerevisiae
fatty acid metabolism and, 111–12
Famine
"fetal origins" hypothesis and, 79–80
FAS genes
Saccharomyces cerevisiae
fatty acid metabolism and, 108–9
Fasting
peroxisomal β-oxidation

and PPARα, 219–20
FAT1 gene
Saccharomyces cerevisiae
fatty acid metabolism and, 100–1
Fat absorption
apolipoprotein A-IV in regulation of food intake and, 231, 237–38
Fat body
fat metabolism in insects and, 23, 34–37
Fat-free mass
successful weight loss maintenance and, 330–31
Fat metabolism
insects and, 23–38
Fat oxidation
successful weight loss maintenance and, 331–32
Fat-soluble vitamins
fat metabolism in insects and, 28–29
Fatty-acid-binding proteins
peroxisomal β-oxidation and PPARα, 208–9
Fatty acids
apolipoprotein A-IV in regulation of food intake and, 231–48
fat metabolism in insects and, 27–28
peroxisomal β-oxidation and PPARα, 193–224
Saccharomyces cerevisiae
fatty acid metabolism and, 97–112
Fatty acyl CoA oxidase
peroxisomal β-oxidation and PPARα, 193–224
Feces
zinc homeostasis and, 429, 438–46
FEN1 gene
Saccharomyces cerevisiae
fatty acid metabolism and, 110
Ferritin
folate catabolism and, 255–75
nutritional iron deficiency and, 7–11, 15–16
Ferulic acid
polyphenols and cancer, 383
"Fetal origins" hypothesis
associations between maternal nutritional status or birth weight and outcomes, 82–83
birth weight
high birth weight, 76–77
low birth weight, 75–6
normal birth weight, 77–78
catch-up growth, 81–82
conclusions, 88–89
epidemiologic studies, 78–84
experimental species, 85–86
future research, 83–84
intervention studies, 84–85
introduction, 74–75
maternal nutritional status
developing countries, 80–81
famine-stricken women in developed countries, 79–80
well-nourished women in developed countries, 78–79
public health action, 86–88
summary, 84
Finland
"fetal origins" hypothesis and, 79
Fish
nutritional iron deficiency and, 6
Flavanols
polyphenols and cancer, 383–84
Flavonoids
polyphenols and cancer, 381, 383–84, 391–92, 395–96
Flavonols
polyphenols and cancer, 383–84
Flaxseed
polyphenols and cancer, 394
Flight muscle
fat metabolism in insects and, 23, 37
Folate catabolism
accumulation, 260–62
alcohol, 273
altered folate status, 268–73
anticonvulsant drug use, 272
cancer, 271–72
cellular compartmentation, 258–59
chemical stability in vitro, 263
conclusions, 273–75
consequences of impaired folate status, 259
folypoly-γ-glutamate hydrolase, 262
folypoly-γ-glutamate synthase, 260–62
increased catabolism, 268–73
introduction, 256
in vivo catabolism, 263, 266
mechanism, 266–68
neonatal growth, 268–70
nutriture and status, 268
oral contraceptive use, 270–71
physiological functions of folate, 256–58
pregnancy, 268–70
retention, 260–62
structure of folates, 257

thyroid hormone, 273
transport, 260
turnover, 262–68
Folypoly-γ-glutamate hydrolase
folate catabolism and, 262
Folypoly-γ-glutamate synthase
folate catabolism and, 260–62
Food frequency questionnaires
preschool dietary assessment and, 475, 487–92
Food Habits Questionnaire
successful weight loss maintenance and, 328
Food intake regulation
apolipoprotein A-IV and, 231–48
successful weight loss maintenance and, 323–38
Food recalls
preschool dietary assessment and, 475, 477–86
Food records
preschool dietary assessment and, 479, 487
Formica polyctena
fat metabolism in insects and, 28
6-Formyltetrahydropterin
folate catabolism and, 264
FOX genes
Saccharomyces cerevisiae fatty acid metabolism and, 103–4, 106

G

Gambia
"fetal origins" hypothesis and, 80–81
vitamin A and, 175
Gastrointestinal (GI) tract
apolipoprotein A-IV in regulation of food intake and, 231, 235–40
gastrointestinal nematodes, nutrition, and immunity, 297–312
glutathione peroxidases and, 460
megalin- and cubilin-mediated endocytosis, 416–18
nutritional iron deficiency and, 13
zinc homeostasis and, 433–34
Gender
"fetal origins" hypothesis and, 73–89
folate catabolism and, 268–71
LDL heterogeneity and, 283, 287–91
nutritional iron deficiency and, 3–4, 9–10, 12–17
successful weight loss maintenance and, 327
vitamin A and, 167–68, 172
Gene knockout models
peroxisomal β-oxidation and PPARα, 193–224
Genetics
C/EBP regulation of gene expression and, 141–65
G6PD dietary control and, 121–34
LDL heterogeneity and, 283–91
megalin- and cubilin-mediated endocytosis, 407–23
peroxisomal β-oxidation and PPARα, 193–224
Saccharomyces cerevisiae fatty acid metabolism and, 97–112
Genistein
polyphenols and cancer, 383, 392–93
Genomics
Saccharomyces cerevisiae fatty acid metabolism and, 97–112
Ghana
vitamin A and, 180
Girls
nutritional iron deficiency and, 4, 14
Glomerular filtration rate
maintenance dialysis patients and, 343–66
Glucocorticoids
C/EBP regulation of gene expression and, 157–58
Glucose-6-phosphate dehydrogenase (G6PD)
dietary control of
cellular growth, 125
conclusions, 133–34
hormonal status, 127–28
introduction, 122
lipogenesis, 123–24
nutritional status, 125–28
oxidative stress, 124
posttranscriptional regulation, 129–33
posttranslational regulation, 128–29
pretranslational regulation, 129–33
starvation and refeeding paradigm, 125–26
translational regulation, 128–29
type and amount of dietary carbohydrate, 126
type and amount of dietary fat, 126–27
Glutathione peroxidases
selenium-containing proteins and, 453, 458–59, 461

Glycoproteins
apolipoprotein A-IV in regulation of food intake and, 231–48
GNS1 gene
Saccharomyces cerevisiae fatty acid metabolism and, 110
Grape constituents
polyphenols and cancer, 393–94
Growth
folate catabolism and, 268–70
G6PD dietary control and, 121, 125
nutritional iron deficiency and, 3–4, 14, 17
Growth hormone
maintenance dialysis patients and, 363
Guatemala
"fetal origins" hypothesis and, 84
gastrointestinal nematodes, nutrition, and immunity, 303
vitamin A and, 169
Gut
fat metabolism in insects and, 23
Gut helminth infections
vitamin A and, 169–70

H

Haemonchus contortus
gastrointestinal nematodes, nutrition, and immunity, 301
Heligmosomoides polygyrus
gastrointestinal nematodes, nutrition, and immunity, 302, 306–8
Heliothis zea
fat metabolism in insects and, 26
Hemoglobin
nutritional iron deficiency and, 1, 3, 10–13, 15
Hemolymph
fat metabolism in insects and, 23–38
Hepatic steatosis
peroxisomal β-oxidation and PPARα, 193, 195, 219–20
Hepatocellular carcinoma
peroxisomal β-oxidation and PPARα, 193
Heterogeneity
LDL, 283–91
High-carbohydrate diet
LDL heterogeneity and, 283–91
High-fat diet
apolipoprotein A-IV in regulation of food intake and, 231, 247–48
successful weight loss maintenance and, 332
Homeostasis
zinc
key variables of, 429–48
Hormones
C/EBP regulation of gene expression and, 141–65
fat metabolism in insects and, 35–36
folate catabolism and, 273
G6PD dietary control and, 127–28
protein-bound megalin- and cubilin-mediated endocytosis, 407–23
Human immunodeficiency virus (HIV)
vitamin A and, 183
Hydrogen peroxide (H_2O_2)
peroxisomal β-oxidation and PPARα, 193–224
Hypercholesterolemia
African diaspora and nutritional consequences, 47, 55, 64–65
Hypertension
African diaspora and nutritional consequences, 47, 61–63, 65

I

IDP3 gene
Saccharomyces cerevisiae fatty acid metabolism and, 112
Ileum
apolipoprotein A-IV in regulation of food intake and, 231–48
Immune response
gastrointestinal nematodes, nutrition, and immunity, 297–312
vitamin A and, 167, 174–80
Import
Saccharomyces cerevisiae fatty acid metabolism and, 102–3
India
"fetal origins" hypothesis and, 80
vitamin A and, 170, 180
Indonesia
gastrointestinal nematodes, nutrition, and immunity, 304
nutritional iron deficiency and, 14
vitamin A and, 169, 180
Inducible systems
peroxisomal β-oxidation and PPARα, 202–4
Indwelling atrial catheterization
apolipoprotein A-IV in regulation of food intake and, 243
Infants

folate catabolism and, 268–70
nutritional iron deficiency and, 3, 17
vitamin A and, 167–84
Infection
vitamin A and, 167–69, 181–84
Inflammation
maintenance dialysis patients and, 343–66
vitamin A and, 171, 174
Inhibition
C/EBP regulation of gene expression and, 145–47
Innate immunity
vitamin A and, 174
Insects
fat metabolism and
absorption, 32–33
apolipoproteins, 30
carotenoids, 28
conclusions, 38
dietary requirements, 25–28
essential fatty acids, 27–28
export, 33–34
fat body
mobilization from, 35–37
storage in, 34–35
fat-soluble vitamins, 28–29
flight muscle, 37
hormones, 35–36
introduction, 24
lipidation, 30–31
lipid delivery to tissues, 37–38
lipolysis, 32
lipophorin, 29–31, 36–37
low-density lipophorin, 36–37
metabolic transformations, 26
nutritional requirements, 25–29
oocyte, 37–38
prostaglandins, 27–28
reusable shuttle in lipid transport, 31
sterols, 25–27
synthesis of steroid hormones, 26–27
Insulin
apolipoprotein A-IV in regulation of food intake and, 246
Insulinlike growth factor 1 (IGF-1)
maintenance dialysis patients and, 363
Insulin resistance
successful weight loss maintenance and, 332
Integument
zinc homeostasis and, 434
International Collaborative Study on Hypertension in Blacks (ICSHIB)
African diaspora and nutritional consequences, 56–57
Intervention studies
"fetal origins" hypothesis and, 84–85
Intestines
apolipoprotein A-IV in regulation of food intake and, 231, 235–40
megalin- and cubilin-mediated endocytosis, 416–19
nutritional iron deficiency and, 11
zinc homeostasis and, 433–34
Intraperitoneal instillation of dialysate
maintenance dialysis patients and, 355–56
Intravenous infusion
apolipoprotein A-IV in regulation of food intake and, 240–43
Iodothyronine deiodinases
selenium-containing proteins and, 453, 461–62
Iron deficiency
gastrointestinal nematodes, nutrition, and immunity, 297, 305
nutritional
adolescence, 4
basal iron losses, 2–3
conclusions, 16–17
control of dietary iron absorption, 7–11
diagnosis, 15–16
dietary iron absorption, 4–7
growth requirements, 3–4
intestinal muscosa and communication of iron balance, 11
introduction, 2
iron deficiency anemia, 11–12
liabilities, 12–14
menstrual iron losses, 3
newborn, full-term infant, 3
overload, 15
pathogenesis, 2
physiological iron requirements, 2–4
pregnancy, 4
Iron storage protein
folate catabolism and, 255–75
Isoflavones
polyphenols and cancer, 381, 383–84, 392–93, 396–97

J

Jamaica
"fetal origins" hypothesis

and, 78

K

Kenya
  vitamin A and, 169
Kidneys
  maintenance dialysis patients and, 343–66
  megalin- and cubilin-mediated endocytosis, 418–19
  zinc homeostasis and, 434

L

Laspoderma serrlione
  fat metabolism in insects and, 25
Leptin
  apolipoprotein A-IV in regulation of food intake and, 246
  maintenance dialysis patients and, 343, 355
  successful weight loss maintenance and, 333
Ligands
  megalin- and cubilin-mediated endocytosis, 407, 414–16
  peroxisomal β-oxidation and PPARα, 209–10
Lignans
  polyphenols and cancer, 381, 383, 385, 394, 396–97
Linearity
  zinc homeostasis and, 443–45
Lipids
  apolipoprotein A-IV in regulation of food intake and, 231–48
  fat metabolism in insects and, 23–38
  LDL heterogeneity and, 283–91
  peroxisomal β-oxidation and PPARα, 193–224
  protein-bound megalin- and cubilin-mediated endocytosis, 407–23
Lipid transport system
  fat metabolism in insects and, 23–38
  Saccharomyces cerevisiae fatty acid metabolism and, 100–3
Lipogenesis
  G6PD dietary control and, 121, 123–24
Lipolysis
  fat metabolism in insects and, 32
Lipophorin
  fat metabolism in insects and, 23, 29–31, 36–37
Lipopolysaccharide (LPS)
  vitamin A and, 172, 174
Liver
  apolipoprotein A-IV in regulation of food intake and, 231–48
  nutritional iron deficiency and, 11, 16
  peroxisomal β-oxidation and PPARα, 193–224
  vitamin A and, 169, 171, 173
Liver cancer
  peroxisomal β-oxidation and PPARα, 193
Locusta migratoria
  fat metabolism in insects and, 28–31, 35–36
Long-chain fatty acids
  peroxisomal β-oxidation and PPARα, 193–224
Low-density lipoprotein (LDL)
  conclusions, 290–91
  heterogeneity and coronary artery disease risk, 286–87
  dietary effects on LDL subclasses, 287–90
  heterogeneity, 285
  introduction, 284–85
  small, dense LDL subclass phenotype, 286–87
Low-density lipoprotein (LDL) receptor type-A repeats
  megalin- and cubilin-mediated endocytosis, 407
Low-fat diet
  LDL heterogeneity and, 283–91
  successful weight loss maintenance and, 323, 327–28
Lucilla sericata
  fat metabolism in insects and, 25

M

Macronutrient deficiencies
  gastrointestinal nematodes, nutrition, and immunity, 299–303
Macrophages
  vitamin A and, 167, 176–77
Maintenance dialysis patients
  nutritional management of
    acute-phase response, 358–60
    anorexia, 352–56
    bioincompatible membranes, 360–61
    chronic peritoneal dialysis, 349–50
    comorbidity, 356–57, 363
    delayed gastric emptying, 354, 356
    dialysate, 361–62
    dialysis vascular access, 362

factors limiting improvement in nutritional status, 345–64
hormonal milieu, 363
inadequate solute clearances, 352–54
inflammation, 358–64
chronic renal failure per se, 362–63
comorbidity, 363
as link between malnutrition and cardiovascular mortality, 363–64
protein requirements, 360
renal failure, 357–58
sources of related to dialysis procedure, 360
intraperitoneal instillation of dialysate, 355–56
introduction, 344
leptin, 355
low nutrient intake, 347–56
morbidity, 344–45
mortality, 344–45
nutrition in predialysis stage of chronic renal failure, 345–47
outcomes, 364–66
protein and energy requirements, 348–52
protein-energy malnutrition, 344–45
spontaneous protein and energy intake, 352
uremia-dependent processes, 362
volume overload, 362–63
Malabsorption
vitamin A and, 169–70
Malaria
vitamin A and, 172, 183–84
Malnutrition
gastrointestinal nematodes, nutrition, and immunity, 297–312
maintenance dialysis patients and, 343–66
Manduca sexta
fat metabolism in insects and, 26, 29–35
Maternal nutrition
"fetal origins" hypothesis and, 73–89
Measles
vitamin A and, 169, 174, 181
Meat
nutritional iron deficiency and, 6, 10
Megachile rotundata
fat metabolism in insects and, 26
Megalin- and cubilin-mediated endocytosis
polarized epithelia and
conclusions, 422–23
cubilin structure, 411–12
expression of cubilin and megalin
cellular expression, 412–13
processing, 413–14
tissue distribution, 412
trafficking, 413–14
future perspectives, 422–23
intestine, 416–19
introduction, 408–9
kidney, 418–19
ligands, 414–16
megalin structure, 410–11
miscellaneous tissues, 422
thyroid gland, 421–22
yolk sac, 419–21
Men
LDL heterogeneity and, 283, 287–91
nutritional iron deficiency and, 9–10, 14
successful weight loss maintenance and, 327
Menstruation
nutritional iron deficiency and, 3–4
zinc homeostasis and, 434–35
Messenger RNA (mRNA)
G6PD dietary control and, 121–34
Metabolic balance
zinc homeostasis and, 429, 435–38
Metabolism
C/EBP regulation of gene expression and, 141–65
fat
insects and, 23–38
fatty acid
Saccharomyces cerevisiae fatty acid metabolism and, 97–112
folate catabolism and, 255–75
G6PD dietary control and, 121–34
LDL heterogeneity and, 283–91
peroxisomal β-oxidation and PPARα, 193–224
successful weight loss maintenance and, 330–34
2-Methyl-branched fatty acyl CoAs
peroxisomal β-oxidation and PPARα, 193–224
Microbial degradation
polyphenols and cancer, 388

Micronutrient deficiencies
gastrointestinal nematodes, nutrition, and immunity, 303–5
Microsomes
peroxisomal β-oxidation and PPARα, 200–1
Midgut
fat metabolism in insects and, 23
Mitochondria
peroxisomal β-oxidation and PPARα, 193, 196–98, 223
MRDR test
vitamin A and, 174
Mucosal barriers
vitamin A and, 167, 174–75
Musca domestica
fat metabolism in insects and, 26, 31

N

National Health Interview Survey
successful weight loss maintenance and, 329
National Task Force on the Prevention and Treatment of Obesity
successful weight loss maintenance and, 334
National Weight Control Registry
successful weight loss maintenance and, 323–27, 330–35, 337–38
Natural killer (NK) cells
vitamin A and, 167, 177
Necator americana
gastrointestinal nematodes, nutrition, and immunity, 298
Negative spiral
gastrointestinal nematodes, nutrition, and immunity, 297–312
Nematodes
gastrointestinal
antihelminthics, 311
breaking the negative spiral, 309–11
causal associations between malnutrition and infection, 298–99
coevolutionary paradigm, 308–9
conclusions, 311–12
enhanced immunocompetence, 311
epidemiological studies in human populations, 300–1
field and experimental studies in livestock, 301
immunological mechanisms underlying nutrition-infection interactions, 305–8
infection, 298–99, 305–9

iron, 305
laboratory studies in rodents, 301–3
macronutrient deficiencies, 299–303
malnutrition, 298–305, 308–9
micronutrient deficiencies, 303–5
nutrient deficiencies promote nematode survival, 299–305
nutritional interventions, 310
place of in world, 298
protein-energy malnutrition, 299–303
Th1 and Th2 immunity, 305–7
vitamin A, 304
zinc, 303–4
Neonates
folate catabolism and, 268–70
nutritional iron deficiency and, 3
Nepal
gastrointestinal nematodes, nutrition, and immunity, 304
vitamin A and, 169, 172, 180
The Netherlands
"fetal origins" hypothesis and, 80
Neutrophils
vitamin A and, 167, 175–76
NHANES I
African diaspora and nutritional consequences, 52
NHANES II
nutritional iron deficiency and, 9–10, 15–16
NHANES III
African diaspora and nutritional consequences, 52
vitamin A and, 173
Nippostrongylus brasiliensis
gastrointestinal nematodes, nutrition, and immunity, 301–7, 310–11
Noninducible systems
peroxisomal β-oxidation and PPARα, 202–4
Non-insulin-dependent diabetes mellitus (NIDDM)
African diaspora and nutritional consequences, 47, 59–61, 65
"fetal origins" hypothesis and, 74, 81–83
North America

zinc homeostasis and, 430
Nullizygosity
peroxisomal β-oxidation and PPARα, 218–19
Nutrition transition
African diaspora and nutritional consequences, 47, 53–54

O

OAF genes
Saccharomyces cerevisiae fatty acid metabolism and, 106–8, 112
Obesity
African diaspora and nutritional consequences, 47, 56–59
apolipoprotein A-IV in regulation of food intake and, 231–48
nutritional iron deficiency and, 1, 17
successful weight loss maintenance and, 323–38
OLE1 gene
Saccharomyces cerevisiae fatty acid metabolism and, 109–10
Oleate reponse elements
Saccharomyces cerevisiae fatty acid metabolism and, 106–7
One-carbon metabolism
folate catabolism and, 255–58, 274
Oocyte
fat metabolism in insects and, 23, 37–38
Oral contraceptives
folate catabolism and, 270–71
Osteoporosis
nutritional iron deficiency and, 1, 17
Ostertagia circumcincta
gastrointestinal nematodes, nutrition, and immunity, 301
Oxidation
successful weight loss maintenance and, 331–32
β-Oxidation
peroxisomal
PPARα and, 193–224
Saccharomyces cerevisiae fatty acid metabolism and, 97, 103–5
Oxidative stress
G6PD dietary control and, 121, 124
Oxygen
nutritional iron deficiency and, 3–4, 12
Oxygenases
nutritional iron deficiency and, 5

P

Paffenbarger Physical Activity Questionnaire
successful weight loss maintenance and, 329
PAL1 gene
Saccharomyces cerevisiae fatty acid metabolism and, 102
Parasites
gastrointestinal nematodes, nutrition, and immunity, 297–312
PAT genes
Saccharomyces cerevisiae fatty acid metabolism and, 102, 112
Pathogen-specific immunity
vitamin A and, 177–78
Peptide YY
apolipoprotein A-IV in regulation of food intake and, 231, 238–40, 248
Periplaneta americana
fat metabolism in insects and, 29
Peritoneal dialysis
chronic
maintenance dialysis patients and, 349–50
Peroxisomal β-oxidation
PPARα and
acyl-CoA-binding protein, 209
AOX deficiency, 216–19
cofactors, 212–13
disorders of peroxisomal lipid metabolism, 214–15
enzymes, 201–7
fasting, 219–20
fatty acid activation and entry into peroxisome, 201–2
fatty acid-binding proteins, 208–9
fatty acid oxidation, 195–201, 215–22
first step of β-oxidation cycle catalyzed by acyl-CoA oxidases, 204–5
genetically-altered mice, 215–22
hepatic steatosis, 219–20
inducible systems, 202–4
introduction, 194–95
isotypes, 211–12
last reaction catalyzed by two different enzymes, 206–7
ligand-binding proteins, 207–9
ligands for PPARα, 209–10
mice nullizygous for both PPARα and AOX PPARα, 218–19
microsomal ω-oxidation, 200–1
mitochondrial β-oxidation, 196–98

noninducible systems, 202–4
peroxisomal diseases, 214–15
peroxisome proliferators, 209–10
perspective, 222–24
polyunsaturated fatty acids, 207
regulatory role of PPARα, 209–13
relevance to humans, 221–22
response elements, 212
second and third steps catalyzed by bifunctional proteins, 205–6
sterol carrier protein-2, 209
Peroxisomes
Saccharomyces cerevisiae fatty acid metabolism and, 97–112
Peru
vitamin A and, 169, 180, 182
Phenobarbital
folate catabolism and, 272
Phenolic acids
polyphenols and cancer, 382–85, 389–90
Phenotype
LDL heterogeneity and, 286–87
Phenytoin
folate catabolism and, 272
Phosphoenolpyruvate carboykinase (PEPCK)
C/EBP regulation of gene expression and, 141, 154–58
Phospholipid hydroperoxide glutathione peroxidase
selenium-containing proteins and, 460–61
Phosphorylation
C/EBP regulation of gene expression and, 141, 149–52
nutritional iron deficiency and, 14
Physical activity
successful weight loss maintenance and, 323, 329–31
Phytate
nutritional iron deficiency and, 6, 11
Pinocytosis
nonspecific
megalin- and cubilin-mediated endocytosis, 407
PIP2 gene
Saccharomyces cerevisiae fatty acid metabolism and, 106–8
Plants
polyphenols and cancer, 381–99
Plasma
glutathione peroxidases and, 460
Pneumonia
vitamin A and, 170
Polarized epithelia
megalin- and cubilin-mediated endocytosis, 407–23
Polygonum cuspidatum
polyphenols and cancer, 393
Polyphenols
cancer and
absorption, 386–88
antioxidative properties, 385–86
bioavailability, 386
catechins, 390–91, 394–95
chemical properties, 382–86
dietary sources, 382–86
enterohepatic circulation, 388
flavanols, 384
flavonoids, 384, 391–92, 395–96
flavonols, 384
flaxseed, 394
grape constituents, 393–94
human studies, 394–97
inhibition of tumorigenesis, 388–90
introduction, 382
isoflavones, 384, 392–93, 396–97
lignans, 385, 394, 396–97
microbial degradation, 388
perspectives, 397–99
phenolic acids and derivatives, 382–85, 389–90
quercetin, 391–92
resveratrol, 393–94
soybean, 392–93
stilbenes, 384–85
tea, 390–95
Polyunsaturated fatty acids (PUFAs)
G6PD dietary control and, 121
peroxisomal β-oxidation and PPARα, 207
Posttranscriptional regulation
G6PD dietary control and, 121, 129–33
Posttranslational regulation
G6PD dietary control and, 128–29
POT1 gene
Saccharomyces cerevisiae fatty acid metabolism and, 103
POX1 gene
Saccharomyces cerevisiae fatty acid metabolism

and, 103–4
PPARα
peroxisomal β-oxidation and, 193–24
Pregnancy
"fetal origins" hypothesis and, 73, 78, 81, 84–85
folate catabolism and, 255, 268–70
nutritional iron deficiency and, 4, 10, 16–17
vitamin A and, 167–68
Preschool dietary assessment
discussion, 493–96
food frequency questionnaires, 487–92
food recalls, 477–86
food records, 479, 487
introduction, 476
methodology, 476–77
miscellaneous studies, 493–94
reproducibility, 491–92
validity, 478–91
Pretranslational regulation
G6PD dietary control and, 129–33
Primidone
folate catabolism and, 272
Pristanoyl-CoA oxidase/ trihydroxycoprostanoyl-CoA oxidase
peroxisomal β-oxidation and PPARα, 193–224
Processing
megalin- and cubilin-mediated endocytosis, 413–14
Programming
"fetal origins" hypothesis and, 73–89
Proliferators
peroxisomal β-oxidation and PPARα, 209–10
Promoters
C/EBP regulation of gene expression and, 141–65
Prostaglandins
fat metabolism in insects and, 27–28
Protein-energy malnutrition
gastrointestinal nematodes, nutrition, and immunity, 297, 299–305
maintenance dialysis patients and, 343, 360
Public health
"fetal origins" hypothesis and, 86–88
PXA genes
Saccharomyces cerevisiae fatty acid metabolism and, 102

Q

Quercetin
polyphenols and cancer, 381, 383, 391–92
Quininoid dihydrofolate
folate catabolism and, 265

R

RBP:TTR ratio
vitamin A and, 173–74
Receptors
megalin- and cubilin-mediated endocytosis, 407–23
nutritional iron deficiency and, 11–12, 15
Red blood cells (RBCs)
nutritional iron deficiency and, 4
Reduced-obese
successful weight loss maintenance and, 323, 330–33
Reductive biosynthesis
G6PD dietary control and, 121, 123–25
Reesterification
apolipoprotein A-IV in regulation of food intake and, 231–48
Regression equations
zinc homeostasis and, 443–45
Regulation
of absorption
nutritional iron deficiency and, 1, 7
C/EBP regulation of gene expression and, 141–65
food intake
apolipoprotein A-IV and, 231–48
G6PD dietary control and, 121, 125–33
peroxisomal β-oxidation and PPARα, 209–13
Saccharomyces cerevisiae fatty acid metabolism and, 97, 106–7
Relative-dose-response (RDR) test
vitamin A and, 169
Reliability
preschool dietary assessment and, 475
Reproducibility
preschool dietary assessment and, 475, 491–92
Respiratory infections
vitamin A and, 169, 182–83
Response elements
peroxisomal β-oxidation and PPARα, 212
Resting metabolic rate
successful weight loss maintenance and, 330–31
Resveratrol
polyphenols and cancer, 381, 383, 393–94
Retinoic acid
vitamin A and, 167–84
Retinol
vitamin A and, 172–73
Retinol-binding protein

(RBP)
vitamin A and, 170–71
Reverse genetics
Saccharomyces cerevisiae
fatty acid metabolism and, 98
RFC-1 gene
folate catabolism and, 260
RNA processing
G6PD dietary control and, 121–34

S

Saccharomyces cerevisiae
fatty acid metabolism and
activation, 100–1
cytoplasmic pools, 102
desaturation, 109–10
elongation, 110–11
fatty acid biosynthesis, 108–11
fatty acid transport, 100–3
functional genomics, 111–12
future research, 111–12
gene expression, 105–8
introduction, 98–99
novel fatty acid-reponsive genes, 107–8
oleate response elements, 106–7
oxidation, 103–5
peroxisomal import, 102–3
peroxisome biogenesis, 99–100
regulation via oleate repose elements, 106–7
saturated fatty acids, 103–4, 108–9
unsaturated fatty acids, 104–5
uptake, 100–1
Satiety
apolipoprotein A-IV in regulation of food intake and, 231–48
Saturated fatty acids
LDL heterogeneity and, 283
Saccharomyces cerevisiae
fatty acid metabolism and, 103–4, 108–9
Schiff base
folate catabolism and, 263–64
Schistocerca americana
fat metabolism in insects and, 25
Schistocerca gregaria
fat metabolism in insects and, 28, 35
SCL-90-R
successful weight loss maintenance and, 335
Scotland
"fetal origins" hypothesis and, 78
Selenium-containing proteins
15-kDa selenoprotein, 465–66
18-kDa selenoprotein, 466
classification, 455–57
further selenoproteins identified in silico, 466
glutathione peroxidases
classical, 458–59
cytosolic, 458–59
gastrointestinal, 460
phospholipid hydroperoxide, 460–61
plasma, 460
sperm nuclei, 461
introduction, 454–55
iodothyronine deiodinases
type 1, 461–62
type 2, 462
type 3, 462
mammalian selenoproteins, 457–58
nonspecific selenoproteins, 456
outlook, 467, 468
selenium-binding proteins, 457
selenium-containing proteins not yet identified, 466–67
selenophosphate synthetase 2, 464
selenoprotein P, 464–65
selenoproteins with known functions, 458–64
selenoproteins with unknown functions, 464–66
selenoprotein W, 465
specific selenoproteins, 455–56
thioredoxin reductases, 462–63
miscellaneous thioredoxin reductases, 463–64
type 1, 463
type 2, 463
Self-monitoring
successful weight loss maintenance and, 328–29
Semen
zinc homeostasis and, 434–35
Serial analysis of gene expressiion (SAGE)
Saccharomyces cerevisiae
fatty acid metabolism and, 112
Serum ferritin
nutritional iron deficiency and, 7–11, 15–16
Shigella dysentery
vitamin A and, 170, 182
Shuttle
reusable
fat metabolism in insects and, 23, 31
Slope of linear regression
zinc homeostasis and, 444, 446
Small intestine

apolipoprotein A-IV in regulation of food intake and, 231–48
Solute clearances
maintenance dialysis patients and, 352–54
Soybean
nutritional iron deficiency and, 6
polyphenols and cancer, 381, 392–93
Sperm nuclei
glutathione peroxidases and, 461
"Sports anemia"
nutritional iron deficiency and, 4
Sprague-Dawley rats
apolipoprotein A-IV in regulation of food intake and, 231–48
SRE1 gene
Saccharomyces cerevisiae fatty acid metabolism and, 110
Stable isotope techniques
zinc homeostasis and, 429, 431–32
Staphylococcus aureus
vitamin A and, 176
Starvation and refeeding paradigm
G6PD dietary control and, 125–26
Steatohepatitis
peroxisomal β-oxidation and PPARα, 193
Sterol-carrier protein-2
peroxisomal β-oxidation and PPARα, 209
Sterols
fat metabolism in insects and, 23, 25–27
Stilbenes
polyphenols and cancer, 383–85
Storage
fat metabolism in insects and, 34–35
Strongyloides ratti
gastrointestinal nematodes, nutrition, and immunity, 303–4
Strongyloides stercoralis
gastrointestinal nematodes, nutrition, and immunity, 300
Sudan
vitamin A and, 180
Supplementation
"fetal origins" hypothesis and, 73–89
vitamin A and, 181–84
SUR4 gene
Saccharomyces cerevisiae fatty acid metabolism and, 110
Survival
gastrointestinal nematodes, nutrition, and immunity, 299–305
Sweden
nutritional iron deficiency and, 3, 16

T

Tanzania
vitamin A and, 183
Target height
"fetal origins" hypothesis and, 76
T-cells
vitamin A and, 167, 177
Tea
polyphenols and cancer, 381, 390–91, 394–95
T-helper (Th) cells
gastrointestinal nematodes, nutrition, and immunity, 297, 305–9
vitamin A and, 167, 177–80
Thiolase
peroxisomal β-oxidation and PPARα, 193–224
Thioredoxin reductases
selenium-containing proteins and, 453, 462–64
Thiry-Vella fistula
apolipoprotein A-IV in regulation of food intake and, 241
Three Factor Eating Scale
successful weight loss maintenance and, 329
Thyroid hormone
C/EBP regulation of gene expression and, 157–58
folate catabolism and, 273
megalin- and cubilin-mediated endocytosis, 421–22
Tissue distribution
megalin- and cubilin-mediated endocytosis, 412
Total absorption
zinc homeostasis and, 429, 438–46
Total energy intake
preschool dietary assessment and, 475
Tracer techniques
zinc homeostasis and, 429, 431–32
Trafficking
megalin- and cubilin-mediated endocytosis, 413–14
Transactivation
C/EBP regulation of gene expression and, 141
Transcriptional regulation
C/EBP regulation of gene expression and, 154–58
Transcription factors
C/EBP regulation of gene expression and, 141–65
Transferrin

nutritional iron deficiency and, 10–12, 15
Translational regulation
G6PD dietary control and, 128–29
Transport
folate catabolism and, 260
Transthyretin
vitamin A and, 171, 173–74
Triacylglycerol
G6PD dietary control and, 121–34
Tribolium confusum
fat metabolism in insects and, 26
Trichinella spiralis
gastrointestinal nematodes, nutrition, and immunity, 298, 301–8, 310
vitamin A and, 178
Trichuris muris
gastrointestinal nematodes, nutrition, and immunity, 301–3
Trichuris trichiura
gastrointestinal nematodes, nutrition, and immunity, 298, 300
Trichylostrongus colubriformis
gastrointestinal nematodes, nutrition, and immunity, 301
Triglycerides
apolipoprotein A-IV in regulation of food intake and, 231–48
Trihydroxycoprostanoic acid
peroxisomal β-oxidation and PPARα, 193–224
Trogoderma granarium
fat metabolism in insects and, 26
TSH13 gene
Saccharomyces cerevisiae fatty acid metabolism and, 111
Tyrosine
apolipoprotein A-IV in regulation of food intake and, 231, 238–40, 248

U

Uegf protein
megalin- and cubilin-mediated endocytosis, 407, 410–11, 416–17
Undernutrition
African diaspora and nutritional consequences, 47, 54–56
United Kingdom
African diaspora and nutritional consequences, 47–52, 54–55, 57, 60–62, 64–65
"fetal origins" hypothesis and, 77
United States
African diaspora and nutritional consequences, 47–65
maintenance dialysis patients and, 343–66
nutritional iron deficiency and, 10, 15
successful weight loss maintenance and, 335
vitamin A and, 182
Unsaturated fatty acids
Saccharomyces cerevisiae fatty acid metabolism and, 104–5
Uremia
maintenance dialysis patients and, 362

V

Vacuoles
nutritional iron deficiency and, 12
Vagotomy
apolipoprotein A-IV in regulation of food intake and, 240–41
Validity
preschool dietary assessment and, 475, 478–91
Valproate
folate catabolism and, 272
Vascular access
dialysis
maintenance dialysis patients and, 362
Vertebrates
fat metabolism in insects and, 23
Very-long-chain fatty acids (VLCFAs)
peroxisomal β-oxidation and PPARα, 193–224
Very-long-chain CoAs
peroxisomal β-oxidation and PPARα, 193–224
Viruses
vitamin A and, 169, 183
Vitamin A
acute phase response, 172–74
assessment of status, 172–74
barrier functions, 174–75
B-cells, 180
community mortality studies, 180–81
conclusions, 184
decreased intake, 169
diarrhea, 181–82
direct loss, 170–71
gastrointestinal nematodes, nutrition, and immunity, 297, 304
HIV, 183
immune function, 174–80

impaired utilization, 171–72
increased requirement, 171
infection, 181–84
infectious disease, 168–69
innate immunity, 174
introduction, 168
macrophages, 176–77
malabsorption, 169–70
malaria, 183–84
measles, 181
mechanisms, 169–72
morbidity, 180–84
mortality, 180–84
neutrophils, 175–76
NK cells, 177
pathogen-specific immunity, 177–78
RBP:TTR ratio, 173–74
respiratory infections, 182–83
serum retinol, 172–73
supplementation, 181–84
T-helper cells, 178–80
Vitamins
fat metabolism in insects and, 28–29
protein-bound megalin- and cubilin-mediated endocytosis, 407–23
Volume overload
maintenance dialysis patients and, 362–63

W

Weaning period
nutritional iron deficiency and, 17
Weight loss maintenance
successful
behavioral factors, 330–34
definition of success, 325–26
diet, 327–28
fat oxidation, 331–32
insulin resistance, 332
introduction, 324
leptin, 333
low-fat diet, 327–28
metabolic factors, 330–34
metabolic state of reduced obese, 330–33
National Weight Control Registry, 326–27, 333
physical activity, 329–30
psychological consequences, 334–35
resting metabolic rate, 330–31
self-monitoring weight, 328–29
strategies, 327–30
summary, 337–38
weight regain, 336–37
West Africa
African diaspora and nutritional consequences, 47–65
Women
"fetal origins" hypothesis and, 73–89
folate catabolism and, 268–71
nutritional iron deficiency and, 3–4, 10, 12–13, 15–17
successful weight loss maintenance and, 327
vitamin A and, 167–68, 172

X

Xerophthalmia
gastrointestinal nematodes, nutrition, and immunity, 304
vitamin A and, 168–69, 172
Xiphydria maculata
fat metabolism in insects and, 26
Xyleborus ferrugineous
fat metabolism in insects and, 25

Y

Y-axis intercept
zinc homeostasis and, 444
Yeasts
Saccharomyces cerevisiae fatty acid metabolism and, 97–112
yfg1 gene
Saccharomyces cerevisiae fatty acid metabolism and, 98
Yolk sac
megalin- and cubilin-mediated endocytosis, 419–21

Z

Zinc
gastrointestinal nematodes, nutrition, and immunity, 297, 303–4
Zinc homeostasis
alternative scenarios resulting in lower estimates of physiologic requirements, 446–47
alternative strategies for estimating average dietary zinc requirements, 432
conclusions, 448
endogenous fecal zinc and total absorbed zinc, 438–46
estimated average requirements, 447
factorial approach, 433
integument, 434
intestinal excretion of exogenous zinc, 433–34
introduction, 430–31

kidneys, 434
linearity, 443–45
menses, 434–35
metabolic balance, 435–38
nonintestinal excretion of endogenous zinc, 434–35
overview, 431–32
regression equations, 443–45
semen, 434–35
slope of linear regression, 444, 446
stable isotope techniques, 431–32
Y-axis intercept, 444
